

Ollama - Docker - GPU - PC - Screenshot

## Description

Ollama is a tool for running large language models locally on your machine. It supports various models like Llama 3, GPT-4, and others. This setup involves installing Docker and Ollama on a Linux system with GPU support.

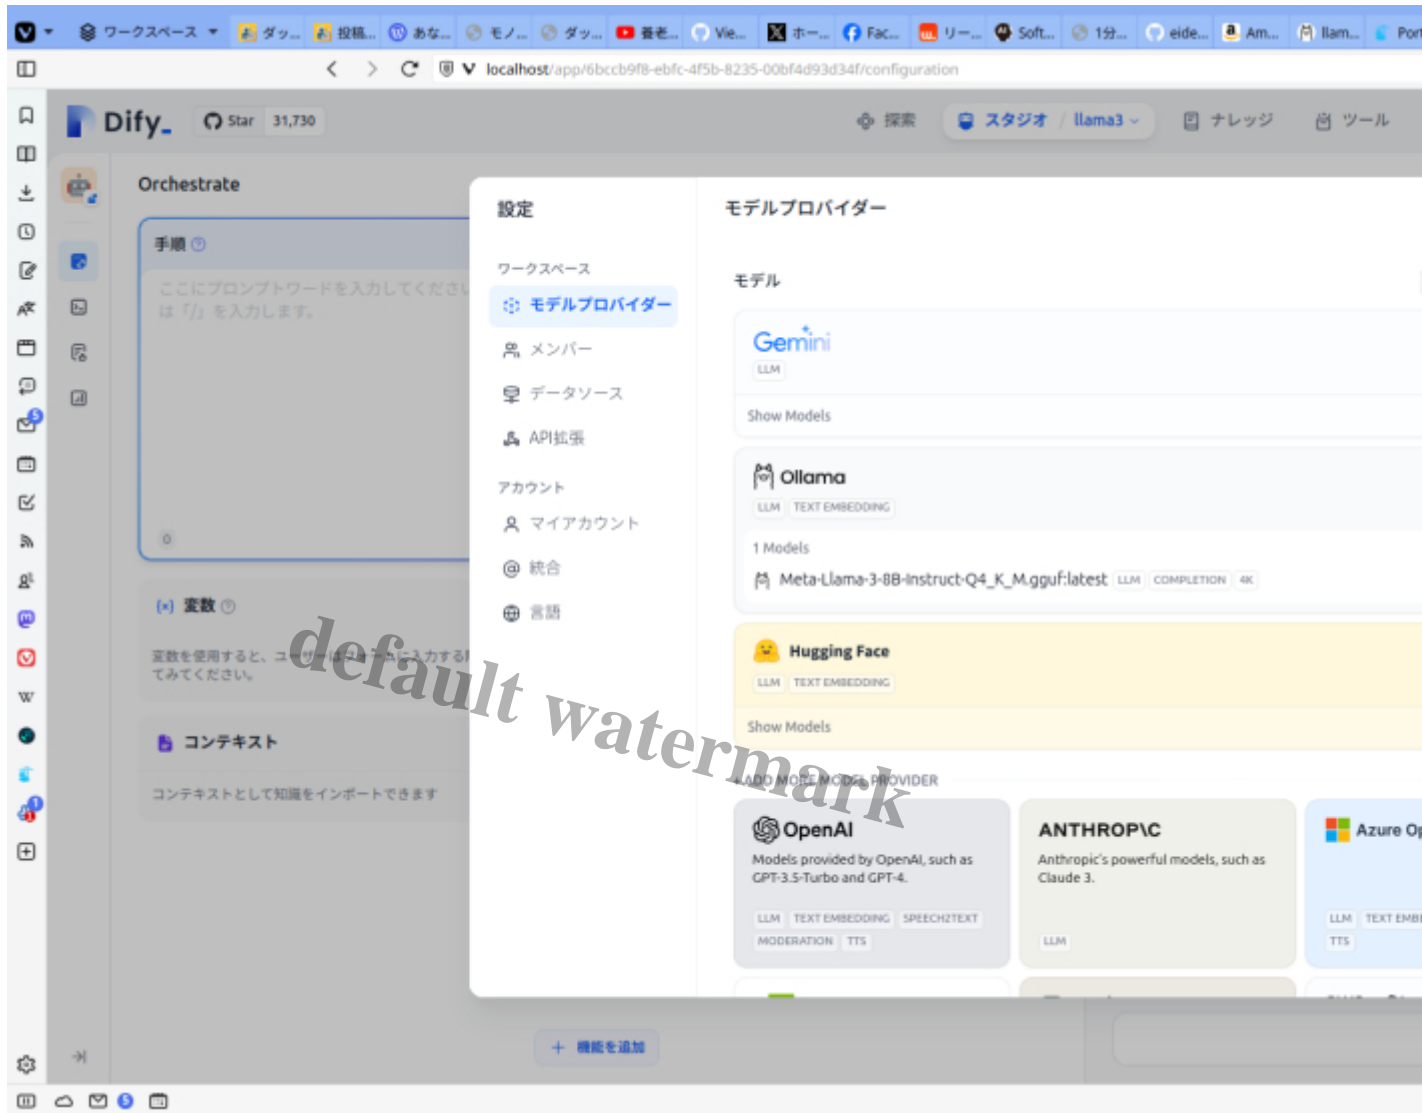

Docker - Ollama - GPU - Docker - Screenshot

GPU support is essential for running large language models efficiently. This setup uses Docker to containerize Ollama and ensures it can utilize the system's GPU resources.

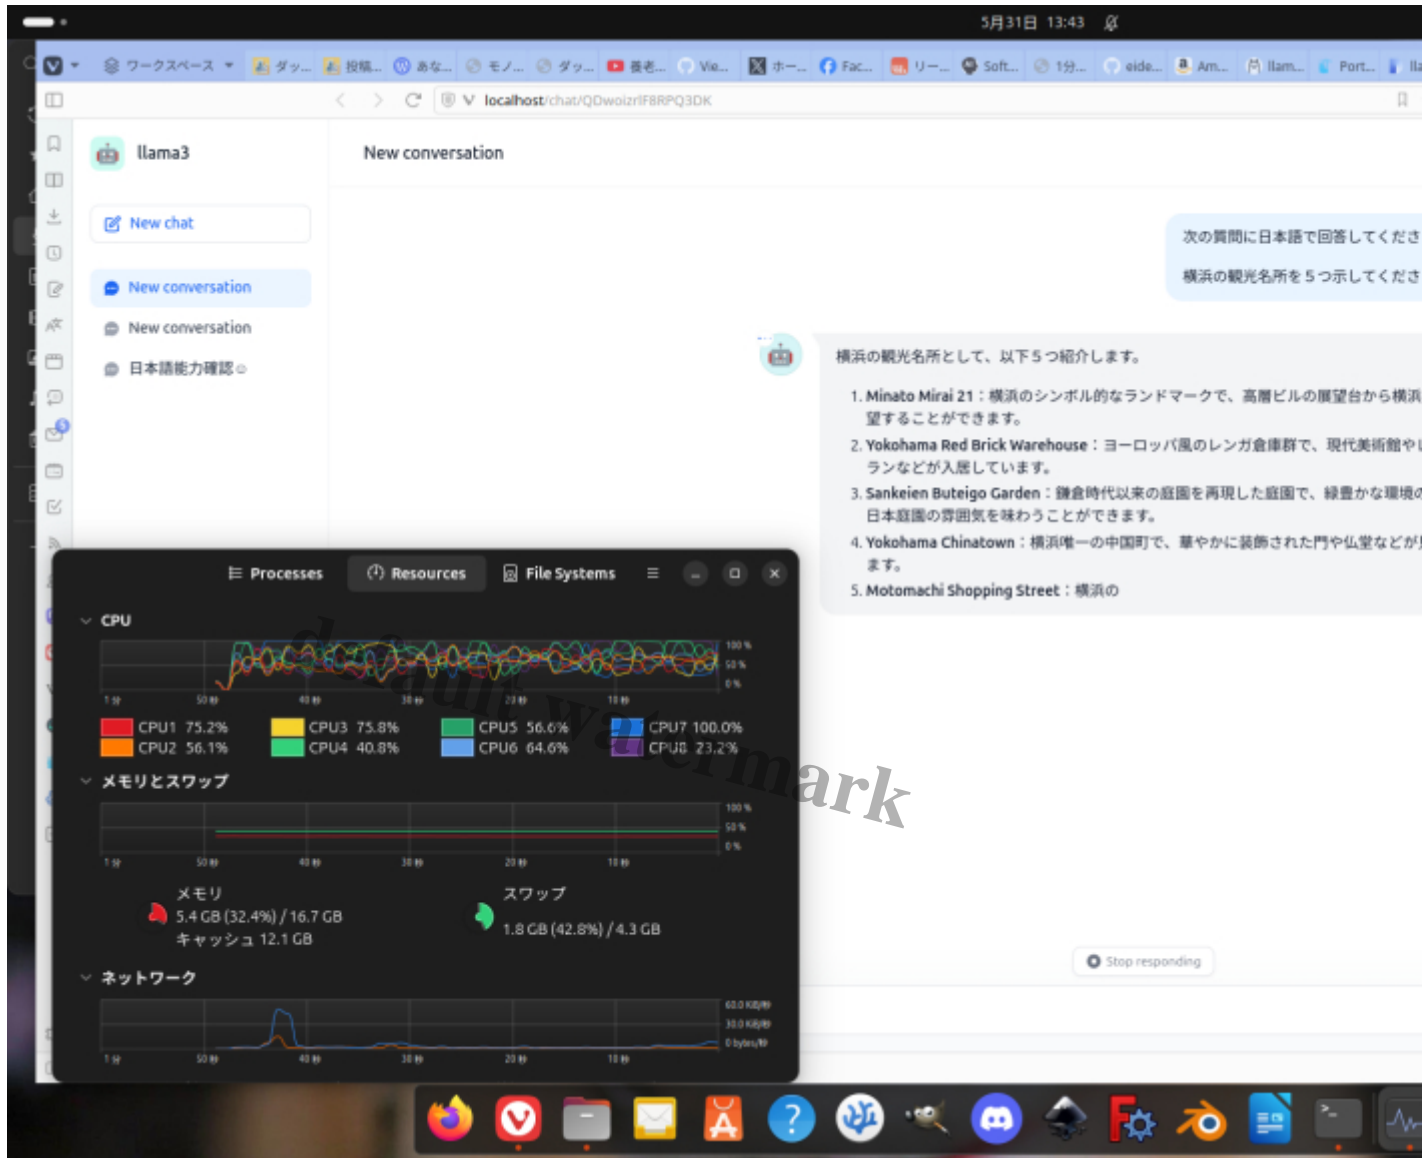

Ollama - GPU - Docker - Screenshot. This setup allows you to run Ollama on a Linux system with GPU support, providing a local environment for running large language models.
